

Accertify Device Intelligence

Identify returning customers. Stop malicious attacks.

It's no question, connected devices have found a permanent place in all aspects of daily life; from opening a bank account to booking your next dream vacation to streaming your favorite TV shows. In fact, it is estimated that there are more than 22 billion devices worldwide¹. With so many always-on consumers, it is critical that organizations can identify loyal, repeat customers and enable a seamless customer experience while simultaneously preventing malicious actors from spoofing their devices to commit fraud.

Confidently Identify Devices.

Device Intelligence collects hundreds of data points about the device, connection, and location. In real-time, the data is analyzed using machine learning and verified against the billions of data points that flow through Accertify's network. The result – confidence and trust in discerning who is on the other end of a digital transaction.

Device Intelligence provides a layered approach to fraud protection through four key components.

Moving From Risk to Trust.

Device Intelligence enables an optimized customer experience across both browser and mobile apps with a simple API integration and sub-second decisions. Proven and trusted by leading financial institutions and ecommerce merchants across the globe, we make it simpler to protect your organization.

PROTECT YOUR BRAND. PROTECT YOUR CUSTOMER.

Trust Accertify.
